

Gen-AI Assistant

Kausha Godhani

Generative Artificial Intelligence Project

Introduction

The Gen-AI Assistant is a conversational AI system enabling users to interact using natural language. It applies Generative AI techniques to generate accurate, context-aware responses in real-time.

System Architecture

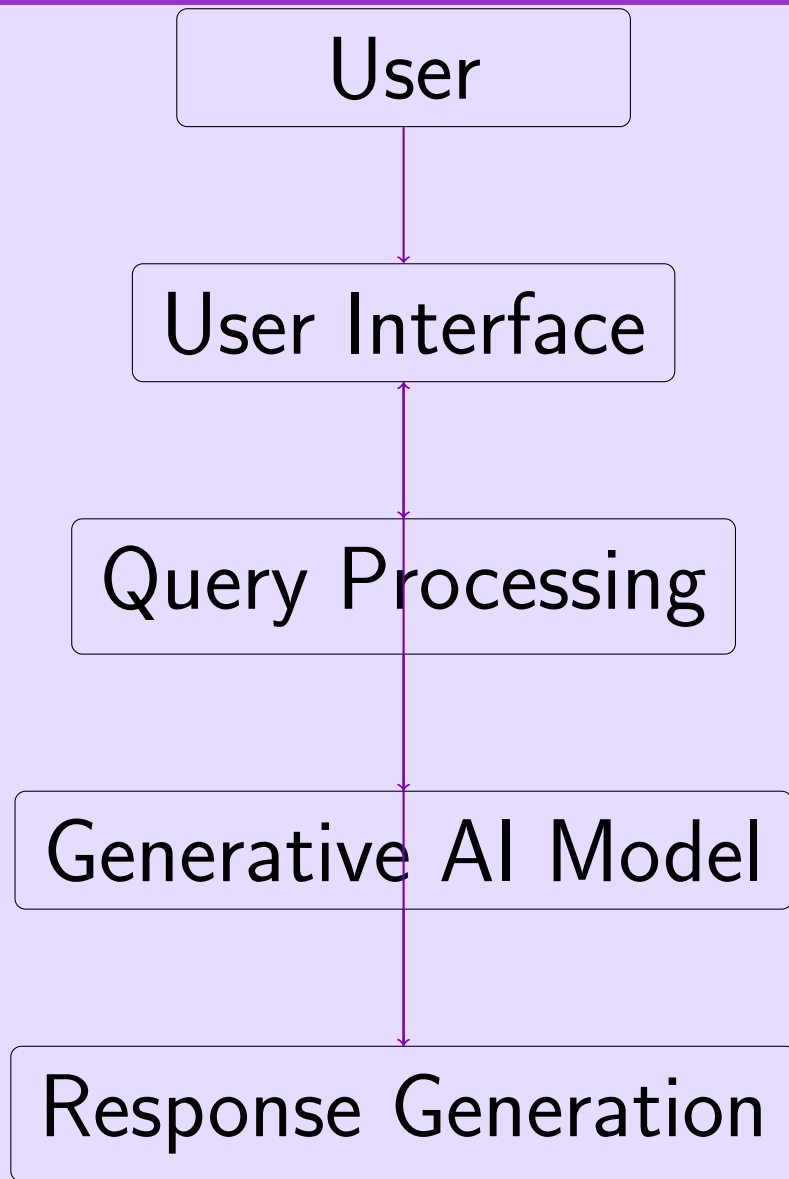

Figure: Conceptual architecture of the Gen-AI Assistant.

Key Features

- ▶ Natural language conversational interface
- ▶ AI-powered response generation
- ▶ Modular and scalable system design
- ▶ Real-time interaction

Conceptual User Interface

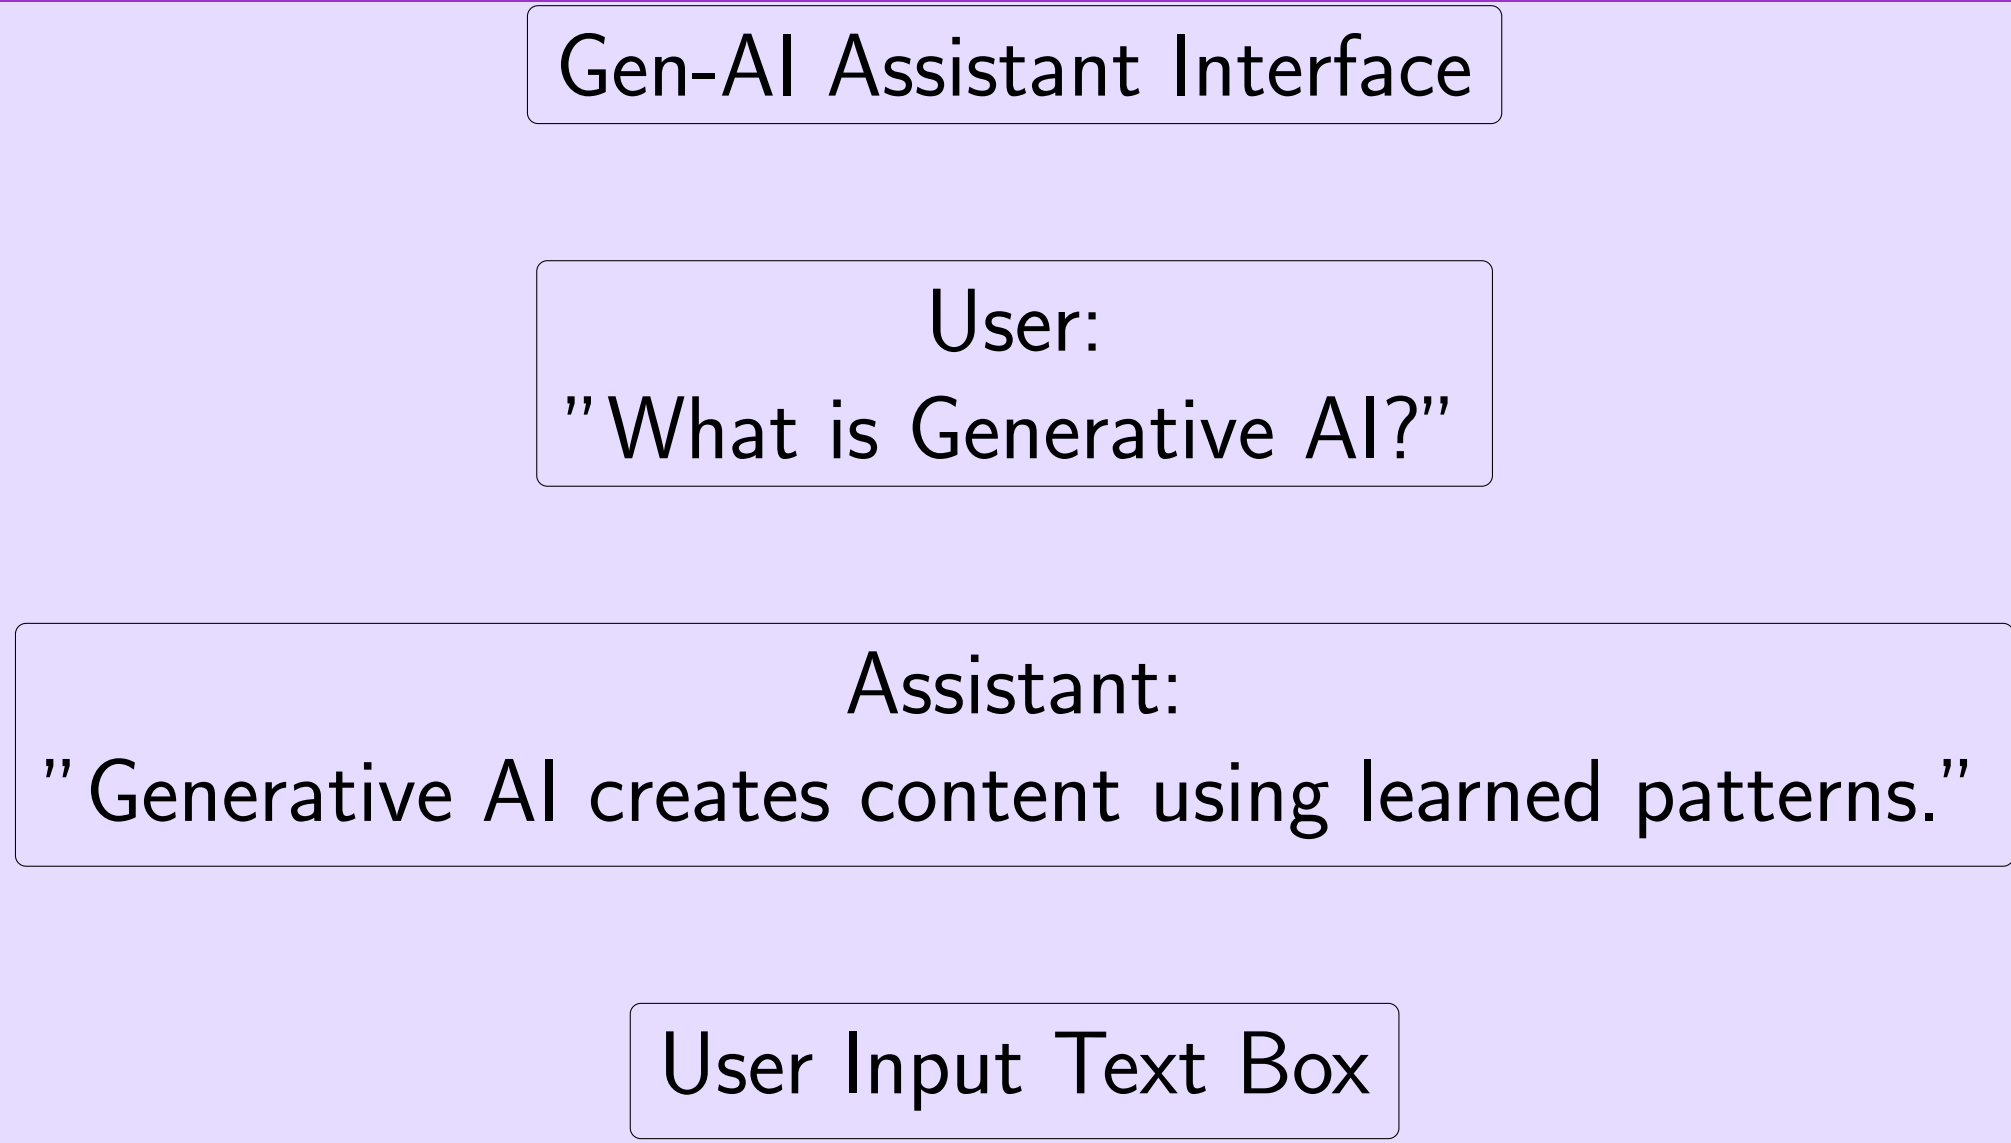

Figure: Conceptual UI representation with sample conversation.

Workflow

1. User submits a query
2. System interprets input
3. Generative AI model generates response
4. Response displayed to the user

Applications

- ▶ Educational assistants
- ▶ Conversational AI systems
- ▶ NLP research
- ▶ Human-computer interaction

Conclusion

The Gen-AI Assistant demonstrates the effective use of Generative AI in building intelligent conversational systems. This project provides a foundation for future enhancements and advanced AI applications.
